PROFESSIONAL SUMMARY

Entry-level cybersecurity candidate who investigated **1,480+ authentication events** and **4,640+ process creation events** in a hands-on Azure SOC lab using **KQL, Log Analytics**, and **Azure Monitor**. Built a **Mini-SIEM** with **4 detection rules** and a secure file-sharing platform with validated **RBAC** and **audit logging**.

TECHNICAL PROJECTS

Azure SOC Monitoring & Detection Lab

[GitHub](#)

Microsoft Azure, Azure Monitor Agent, Data Collection Rules (DCR), Log Analytics, KQL, Windows Security Events

- Investigated **1,480+** failed authentication events (**Event ID 4625**) using **KQL**, analyzing authentication activity to identify suspicious login patterns and mapping detections to **MITRE ATT&CK T1110 (Brute Force)**.
- Analyzed **4,640+** process creation events (**Event ID 4688**) using **KQL**-based queries to support process-execution and security investigations.
- Configured **Azure Monitor** alerts and an **SOC dashboard/workbook** to monitor authentication activity, targeted accounts, process creation, and account-creation events (**Event ID 4720**, mapped to **MITRE ATT&CK T1136.001**).

Mini-SIEM (Security Information & Event Management)

[GitHub](#)

FastAPI, MongoDB, React, Docker, JWT, WebSockets

- Engineered **4 security detection rules** for SSH brute-force, port scanning, SQL injection, and suspicious root logins using threshold- and pattern-based detection logic.
- Developed a **9-endpoint REST API** with **JWT** authentication and **WebSocket-based alert delivery** for security event ingestion, monitoring, and investigation workflows.
- Implemented SSH brute-force detection using a **5+ failures/60-second** threshold and port-scan detection using a **10+ distinct ports/2-minute** threshold.

Secure Cloud File Sharing & Audit Logging

[GitHub](#)

MERN Stack, JWT, RBAC, Persistent Audit Logging

- Implemented **2-role RBAC** with recipient-only authenticated downloads and share-link revocation to enforce least-privilege access controls.
- Validated a **10-step end-to-end security workflow** covering authentication, file sharing, access denial, recipient download, link revocation, and audit-log verification.
- Measured **~145–180 ms** response times across core APIs and **~2.1 seconds** for a 5 MB file upload, with API performance remaining below the **500 ms** target.

EXPERIENCE

PhonePe — CX Operations Intern

Jan 2024 – May 2024

Bengaluru, India

- Analyzed **5,000+** operational and customer records to identify workflow issues and support data-driven process improvements.
- Investigated **200+** operational tickets using root-cause analysis and cross-functional collaboration to support timely resolution.
- Reduced manual reporting effort by **~5 hours/week** by automating reporting and documentation workflows.

EDUCATION

University of Birmingham — MSc in Cybersecurity

Sep 2024 – Jul 2026

Edgbaston, United Kingdom

New Horizon College of Engineering — B.E. in Electrical & Electronics

2020 – 2024

Bengaluru, India

TECHNICAL SKILLS

Cloud & SIEM: Microsoft Azure, Azure Monitor, Log Analytics, Azure Monitor Agent, KQL, Windows Security Events (Event ID 4624/4625/4688)

Security Operations: SIEM, Security Monitoring, Alert Triage, Incident Investigation, Log Analysis, Event Correlation, Incident Response

Programming & Infrastructure: Python, FastAPI, REST APIs, MongoDB, Docker, React, Git, Linux/Bash

Cybersecurity & Security Assessment: MITRE ATT&CK, Digital Forensics, Threat Modeling, Cloud Security, IAM, RBAC, Access Control, Audit Logging

Web & Network Security: Burp Suite, Wireshark, Nmap, OWASP Top 10, Network Security, Vulnerability Assessment, Web Application Security

CERTIFICATIONS & TRAINING

- Network Defense — Cisco Networking Academy (2026)
- Introduction to Cybersecurity — Cisco Networking Academy (2025)
- Configure SIEM Security Operations using Microsoft Sentinel — Microsoft Learn (2026)
- Secure Cloud Resources with Microsoft Security Technologies — Microsoft Learn (2026)
